# People Watching at Winchester Cathedral

3:11 PM - 6:17 PM, October 19

Ge Linling

### **Overview & Methodology**

**Objective:** To observe users' behavior, activities, and interactions outside Winchester Cathedral.

**Methodology:** Stationary observation from the cathedral steps over a 3-hour period, focusing on foot traffic, emotional atmosphere, and public activities.

Tools: notebook, clock, iPad, camera

Fig 1. Winchester cathedral in Google map

## Setting & Environment (Sound Category)

The space was filled with the sound of light chatter, footsteps, and people's laughter, creating a relaxed public atmosphere.

### **Population Density Trends**

Population density fluctuated over the observation period:

- **3:11 PM:** Approx. 1500 people, predominantly families and tourists.
- 4:00 PM: Peak crowd levels (~1600 people), with a notable increase in families with children.
- 6:00 PM: The crowd tapered to fewer than 200 people.

### **Time-based Observations (Emotion Category)**

Emotional and behavioral patterns shifted over time

by family play and increased social interaction. Tranquil and relaxed, with scattered groups enjoying the environment.

Quiet and reflective as the crowd diminished.

### **Activities Breakdown**

Activities observed:

- Sitting and Resting: People relaxed on the grass or steps.
- Walking: Families and tourists wandered around the cathedral.
- Running: 3 people were • running by the cathedral.
- Playing: 112 children were seen playing near the sculptures.
- Dog Walking: 85 dog walkers were observed throughout the day.
- **Others:** 30% of people ٠ visit the church and take pictures
- Most common activities: Sitting and relaxing, followed by family playtime.

### Some USERS activity tracks at PLACE

### Process

#### **Data Collection Process**

### • Quick Notes on Phone

Used my phone to quickly record observations in real-time.

#### • Photos & Videos for Key Moments

Took photos and video to capture significant events and interactions.

• Sketches for Context

Created sketches of people's postures and interactions to provide visual details.

#### Data Structuring and Organization

#### • Organized by Time

Grouped notes and photos by specific time intervals to track changes.

• Categorized by Density

Classified observations based on crowd density at different times.

#### • Activity Types and Emotions

Labeled each entry with activity type (e.g., walking, playing) and observed emotions.
