

1. Visual storytelling conveys information through images, videos, symbols and other visual mediums, it is able to use images and share them, and what they can tell us about our lives in the present, and at the same time, images can convey information faster than words, and can have a rapid emotional interaction with the audience, which can cross some linguistic and cultural limitations. In web design, adding visual storytelling, telling information into a coherent story, so that the audience has a more emotional experience and participation.
2. Adding some interactive things to the web design can improve the user experience, similar to online conversations, through real-time communication and interaction, making the website more interesting.
3. To break out of the conventional design, we can try motion graphics and programming, motion graphics through animation and interactive effects, to make users feel novel and enhance the visual experience.
4. Tracy Ma mentioned that she turns boring things into eye-catching art, such as making some news interesting and using the resources and inspiration of the surrounding environment to create some special things. Creative design can help the audience remember information better, and at the same time, it integrates visual, auditory and interactive elements to enhance the appeal of information.
5. In web design, the audience can feel emotions or experience humor through relaxed and humorous animation effects. Creative collages, humorous labels, funny graphics, changeable expressions can be used, and some vibrant background music and sound effects can be added to make the interaction more interesting. Through these design skills, Can let users have a

special experience when browsing the web, and feel happy, will not feel boring.

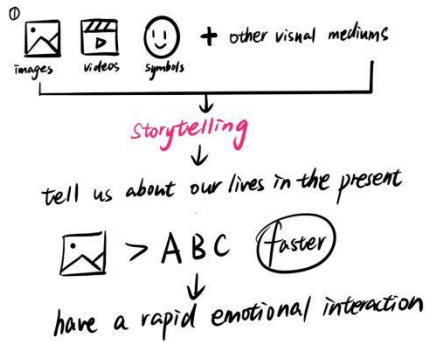

1. For customers, this kind of Avatar robot cafe provides a dining experience different from the traditional cafe. The interaction between the robot and Google increases the interest and improves the customer's experience

2. Avatar Robot Cafe is based on advanced eye movement control technology and robot technology, which allows disabled people to interact with robots and can be controlled remotely. The progress of this technology can not only improve the quality of life of disabled people, but also provide customers with new dining experience. Enhanced customer emotional resonance.

3. The design of the cafe includes facilities and functions suitable for people with limited mobility, which ensures that users can easily interact with the robot, which helps to improve customer engagement and comfort. This highly participatory experience allows customers to have more interactive fun while dining. And this interaction promotes social inclusion and understanding, making customers have more emotional resonance and identification with the design and service of the cafe.

4. Through the designed interactive interface, users can interact with technology and enjoy personalized service experience, which provides greater flexibility and convenience.

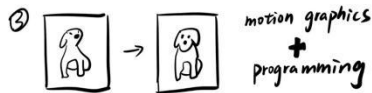

5. The progress and development of science and technology can not only help solve social problems, but also promote social development. Therefore, in the design, it is necessary to consider the participation of more groups and develop in a more diversified direction.
