Project 03 | App 360

Homemist

Breathe in the humidity of your homeland in a foreign country.

Basic Information

Name: Noemi
Age Range: 18-35 years old
Occupation: Students

Problems and Pain Points
Physical Discomfort:

Difficulty adapting to the climate in a new environment, such as tight and dry skin, dry mouth, or fatigue caused by the humid and muggy conditions.
Common health issues caused by humidity differences, such as allergies, respiratory problems, and poor sleep quality.
Psychological Distress:

Physical discomfort amplifies homesickness, creating a sense of disconnection from the environment of their hometown and increasing feelings of loneliness.
Struggling to find comfort in the new environment, which affects learning, work efficiency, and overall well-being.

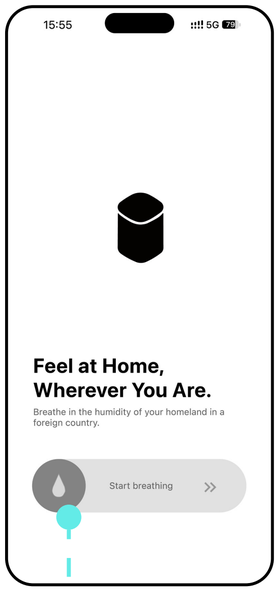
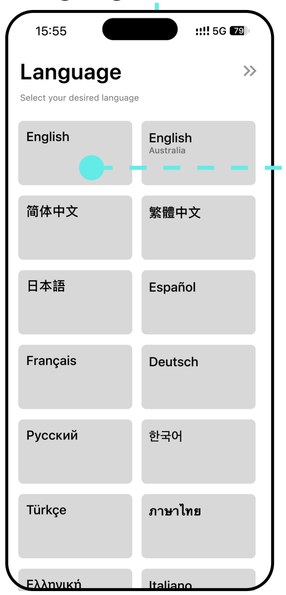
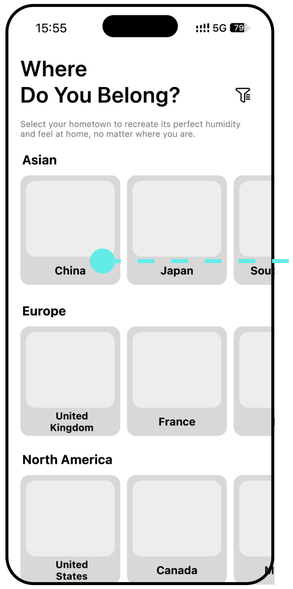
Welcome Page



Language

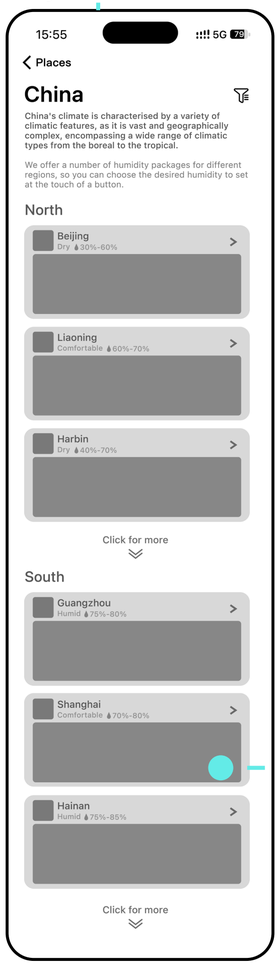


Place

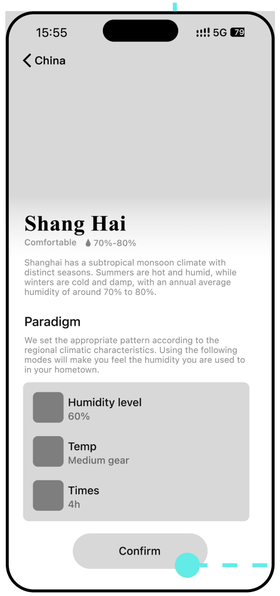


Added language and region selection functionality in the initial setup section. The language selection enhances the sense of belonging for international students, making it more convenient for students from different countries to use.

City

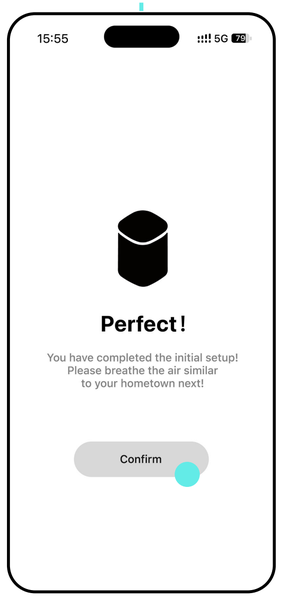


Information



The region selection allows users to set the humidity of their hometown. The system includes a global humidity database, enabling international students to choose their hometown's humidity. Users can also manually adjust the humidity later if needed.

Perform



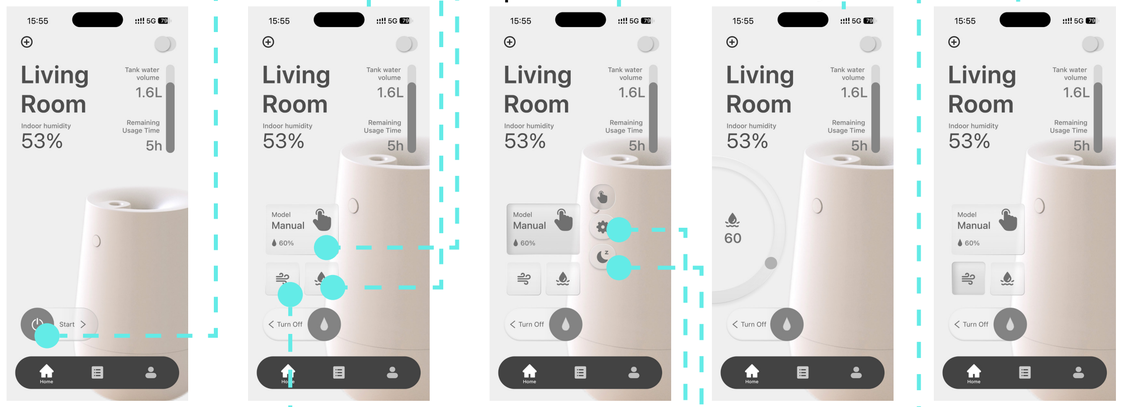
Home

turn on

manually operated

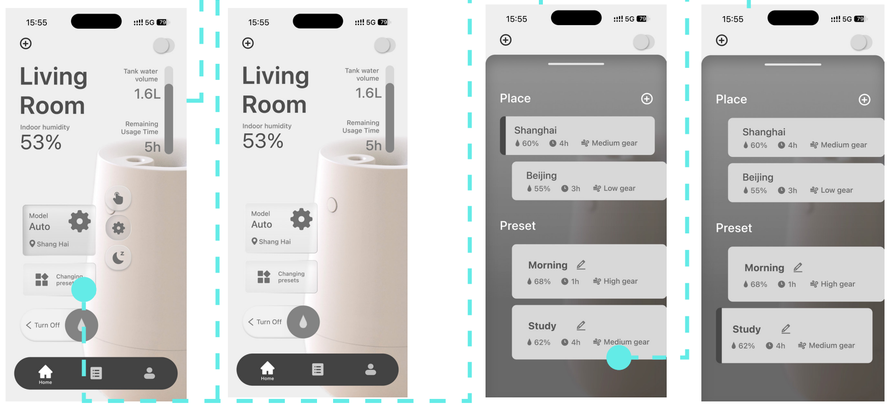
humidity

clean



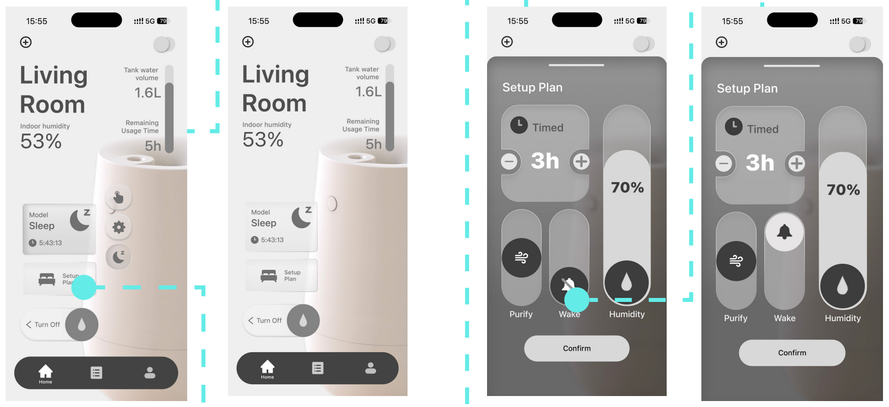
In manual mode, users can adjust the humidity and purification mode themselves.

automatic



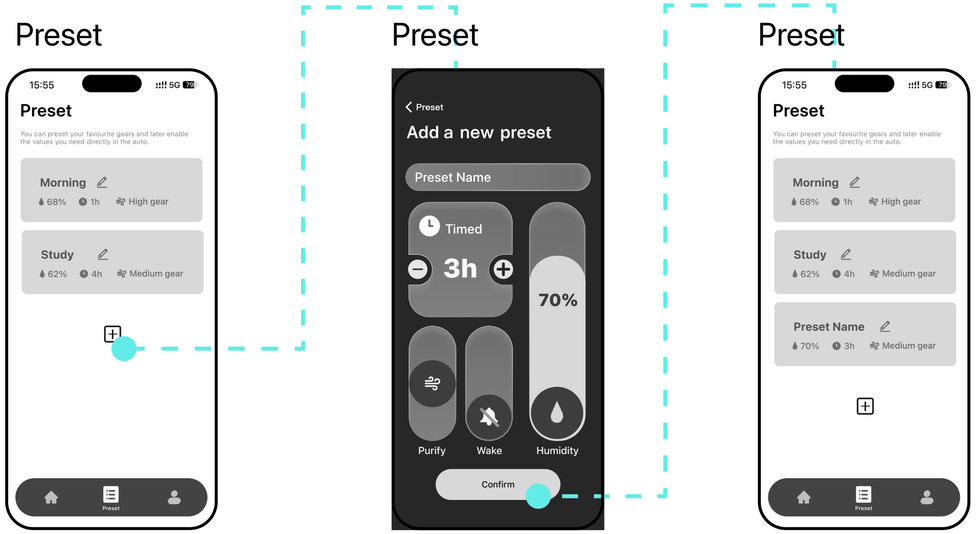
In automatic mode, users can select the added region mode, choosing the officially preset city humidity. This makes it more convenient and closer to the climate humidity of their hometown. Alternatively, users can choose their own custom preset mode.

Sleep

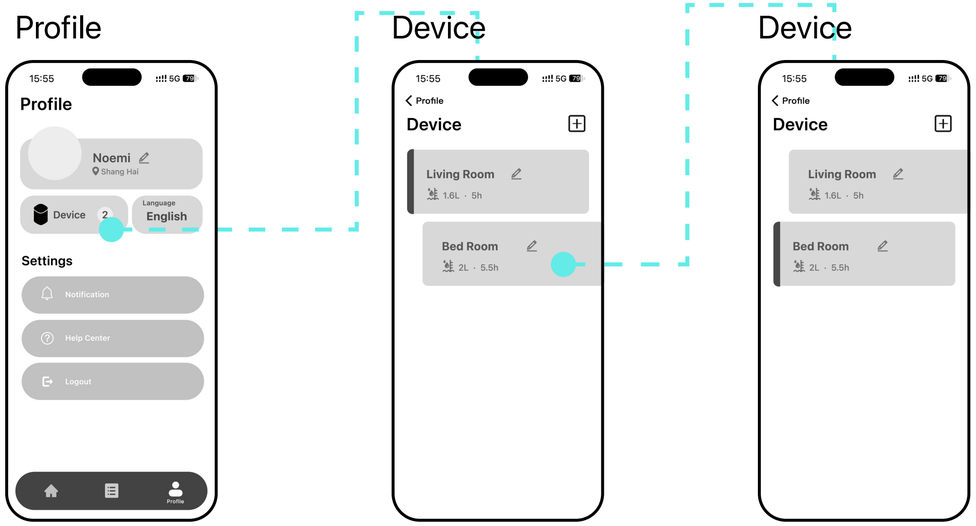


In sleep mode, users can set a timer, adjust the humidity, and select the purification mode. Additionally, there is a reminder feature.

In manual mode, users can adjust the humidity and purification mode themselves.



In the presets, users can create new combinations. For example, different scenarios can have different presets, such as the humidity for every morning or for study sessions. By pre-setting their preferred values, users can directly apply their customized presets the next time they start the device.



In the personal interface, users can change the language and replace devices. A single account can add multiple humidifier devices, allowing users to easily switch between them directly on their phone during use.
